

Close the AI gap in banking

Move beyond experimentation to deliver lasting value

Many banks run isolated AI experiments with limited returns.

Leaders are taking a different approach. They rewire entire domains with orchestrated AI to create strategic distance their competitors cannot close.

Generative AI and agentic orchestration are the latest examples of tech-led disruptions. How quickly you capitalize on the next is up to you.

What's holding you back from your goals?

Scaling AI in financial services isn't easy. The risk of taking the same approach faces a number of challenges.

Siloed Processes

Your AI experiments sit trapped in islands of isolation. No visibility. No coordination between humans, agentic tech, and core systems. Limited strategic improvements.

Legacy Systems

Your core banking platforms weren't built for the next era of AI. The resulting patchwork creates data bottlenecks, slows performance, and compounds complexity. Each limitation slows you down—and increases costs.

Regulatory Compliance

Banking demands trust. Explainability, fairness, and auditability are key pillars. Without enterprise governance, scaling AI introduces risks you cannot afford.

The AI-enabled bank of the future needs agentic orchestration

Camunda's cloud-native design provides the performance, resilience, and flexibility enterprises need to get the most value from your technology.

Agentic orchestration opportunities

Consumer Banking

Credit Decisioning

Cut underwriting time by 20-60%. Approve faster. Win more customers. Reduce risk while maintaining compliance.

Hyper-personalization

Tailor experiences across channels. Boost conversion by 15-30%. Increase cSAT to build loyal customer bases.

Financial Crime

Cut false positives by 80%. Catch more fraud. Reduce investigation costs and stay compliant.

Commercial Banking

Treasury Services

Reduce manual work by 30-50%. Deliver new value-added products. Increase straight-through processing.

Relationship Banking

Give your team the right insights at the right time. Cross-sell more effectively. Provide meaningfully tailored service.

Credit Monitoring

Predict defaults before they happen. Take action earlier. Preserve relationships and your portfolio health.

Capital Markets & Wealth

Trade Operations

Connect market analysis and risk systems with human oversight. Make better decisions, faster.

Investment Research

Deliver actionable insights. Use structured and unstructured data. Maintain compliance and deliver profitable strategies.

Deal Sourcing

Find and qualify better opportunities. Close more business.
